CURRICULUM/STATUTES & REGULATIONS
FOR
5 YEARS DEGREE PROGRAMME
IN
ENDOCRINOLOGY
(MD ENDOCRINOLOGY)

UNIVERSITY OF HEALTH SCIENCES,
LAHORE
1. **Nomenclature Of The Proposed Course**
   The name of degree programme shall be MD Endocrinology. This name is well recognized and established for the last many decades worldwide.

2. **Course Title:**
   MD Endocrinology

3. **Training Centers**
   Departments of Internal Medicine with special interest in Endocrinology (accredited by UHS) in affiliated institutes of University of Health Sciences Lahore.

4. **Duration of Course**
   The duration of MD Endocrinology course shall be five (5) years (first year in Part I, first two years in Part II and next three years in Part III) with structured training in a recognized department under the guidance of an approved supervisor.
   The course is structured in three parts:

   **Part I** is structured for the 1\textsuperscript{st} calendar year. The candidate shall undertake didactic training in Basic Medical Sciences, Behavioural Sciences and Biostatistics & Research Methodology. At the end of first year the examination shall be held in Basic Medical Sciences. The clinical training in fundamental concepts of Internal Medicine shall start from the 1\textsuperscript{st} day of enrollment.

   **Part II** is structured for the 1\textsuperscript{st} and 2\textsuperscript{nd} calendar years. The candidate shall undertake clinical training in fundamental concepts of Internal Medicine. At the end of 2\textsuperscript{nd} year, the examination shall be held in fundamental concepts of Internal Medicine. The clinical training in Endocrinology shall start from 3\textsuperscript{rd} year onwards in the recognized institutions.

   **Part III** is structured for 3\textsuperscript{rd}, 4\textsuperscript{th} and 5\textsuperscript{th} calendar years in MD Endocrinology. The candidate shall undergo training to achieve educational
objectives of MD Endocrinology (knowledge & skills) along with rotation in relevant fields. The research component and thesis writing shall also be included in this part. Over the five years duration of the course, candidate will spend total time equivalent to one calendar year for research during the training. Research can be done as one block in 5th year of training or it can be done in the form of regular periodic rotations over five years as long as total research time is equivalent to one calendar year.

5. Admission Criteria

1. For admission in MD Endocrinology course, the candidate shall be required to have:
   - MBBS degree
   - Completed one year House Job
   - One year experience in Endocrinology/Internal Medicine/Allied medical discipline in the given order of preference
   - Registration with PMDC
   - Passed Entry Test conducted by the University & aptitude interview by the Institute concerned
   - Having up to the mark credentials as per UHS rules (no. of attempts in each professional, any gold medals or distinctions, relevant work experience, Rural/ Army services, research experience in a recognized institution, any research article published in a National or International Journal) may also be considered on case to case basis.

2. Exemptions: A candidate holding FCPS/MRCP/Diplomate American Board/equivalent qualification in Internal Medicine shall be exempted from Part-I & Part-II Examinations and shall be directly admitted to Part-III Examinations, subject to fulfillment of requirements for the examination.
6. Registration and Enrollment

- Total number of students enrolled for the course must not exceed 2 per supervisor/year.
- The maximum number of trainees that can be attached with a supervisor at a given point of time (inclusive of trainees in all years/phases of MD training), must not exceed 6.
- Beds to trainee ratio at the approved teaching site shall be at least 5 beds per trainee.
- The University will approve supervisors for MD courses.
- Candidates selected for the courses after their enrollment at the relevant institutions shall be registered with UHS as per prescribed Registration Regulations.

7. Accreditation Related Issues of the Institution

A). Faculty
Properly qualified teaching staff in accordance with the requirements of Pakistan Medical and Dental Council (PMDC)

B). Adequate Space
Including class-rooms (with audiovisual aids), demonstration rooms, computer lab and clinical pathology lab etc.

C). Library
Departmental library should have latest editions of recommended books, reference books and latest journals (National and International).

- Accreditation of Endocrinology training program can be suspended on temporary or permanent basis by the University, if the program does not comply with requirements for residents training as laid out in this curriculum.
- Program should be presented to the University along with a plan for implementation of curriculum for training of residents.
Programs should have documentation of residents training activities and evaluation on monthly basis.

To ensure a uniform and standardized quality of training and availability of the training facilities, the University reserves the right to make surprise visits of the training program for monitoring purposes and may take appropriate action if deemed necessary.
AIMS AND OBJECTIVES OF THE COURSE

AIM

The aim of five years MD programme in Endocrinology is to train residents to acquire the competency of a specialist in the field of endocrinology, diabetes and metabolism so that they can become good teachers, researchers and clinicians in their specialty after completion of their training.

GENERAL OBJECTIVES

MD Endocrinology training should enable a student to:

1. Overall assessment of patient care that is effective, safe, timely, efficient, equitable and patient-centered.
2. Medical knowledge about established and evolving biomedical, clinical and cognate sciences (e.g., epidemiological and social-behavioral) and the application of this knowledge to patient care.
3. Interpersonal and communication skills that result in effective information exchange and teaming with patient, their families and other health professionals.
4. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles and sensitivity to a diverse patient population, providing cost-effective, ethical and humanistic care.
5. System-based practice, as manifested by actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.
6. Practice-based learning and improvement that involves investigation and evaluation of their own patient care, appraisal and assimilation of scientific evidence and improvement in patient care.
SPECIFIC LEARNING OUTCOMES

Following competencies will be expected from a student completing MD Endocrinology training;

1. Diabetes mellitus:
   - Recognize differences in the pathogenesis and clinical presentation of type 1 and 2 diabetes. Develop the skills to diagnose and treat acute complications of diabetes such as diabetic ketoacidosis (DKA), hyperglycemic hyperosmolar syndrome (HHS) and hypoglycemia. Recognize different pathophysiology of Insulin Resistance Syndrome including various components of this syndrome and how to treat each one.
   - Recognize the important recent studies and various treatment modalities for prevention of diabetes including lifestyle modification and medical therapy and their rationale.
   - Recognize various treatment modalities for therapy for type 2 diabetes utilizing sulfonylureas, biguanides, α-glucosidase inhibitors, and thiazolidinediones, and the site of action of each agent in the pathogenesis of type 2 diabetes.
   - Recognize the importance of recent clinical trials on the use of ACE inhibitors and angiotensin receptor blockers in prevention of deterioration of nephropathy in diabetes as well as their role in prevention of type 2 diabetes in those patients with impaired glucose tolerance.

2. Thyroid disorders:
   - Interpret thyroid function tests for various forms of thyroid pathology.
   - Evaluate how various aspects of thyroid function may affect cardiac function and the theory behind such actions.
   - Apply the knowledge from clinical trials for treatment of thyroid cancer and measurement of the outcome of such therapies.
   - Evaluate thyroid storm and Myxedema coma and their etiopathology and treatment.
   - Evaluate theories behind alteration of lipid metabolism in various forms of thyroid disorders.
3. **Lipid disorders:**
- Recognize the pathogenesis of various classes of dyslipidemias and what aspects are important in the evolution of the Metabolic Syndrome.
- Manage dietary and pharmacological therapies of dyslipidemias.
- Recognize various hypotheses for the development of atherosclerosis, oxidative stress, and the role of antioxidants in the prevention of atherogenesis and the controversy regarding the use of vitamin C and vitamin E.

4. **Hypertension:**
- Recognize various endocrine organs dysfunction that leads to the development of hypertension and the pathogenesis of each etiologic factor.
- Use the latest advances and diagnostic maneuvers to differentiate between hypertension due hyperaldosteronism, Cushing's, and pheochromocytoma as well as hypercalcemia and hyperthyroidism.

5. **Metabolic bone disorders:**
- Recognize the important role of diet and hormones in the genesis of osteopenia and osteoporosis.
- Recognize indications for bone densitometry and interpret the results.
- Describe treatment options for various forms of osteoporosis (postmenopausal, corticosteroid-induced).
- Diagnose vitamin D intoxication and vitamin D deficiency describing the clinical features of each and the management of each disorder.
- Recognize Vitamin D intoxication in both children and adults.
- Recognize the metabolic pathway of Vitamin D, the active form of this vitamin, and the site in the body where this vitamin is converted to its active form.
- Recognize the important molecular mechanism of PTH in bone and other tissue. Diagnose various forms of hypo and hyperparathyroidism.
6. Calcium:
- Distinguish between hypercalcemia of neoplastic origin versus hypercalcemia associated with parathyroid adenoma.
- Diagnose by imaging method between hyperparathyroid and thyroid disease; the medical versus surgical management; and theory behind each method.
- Describe the management of hyper and hypocalcemic crises and the theory behind such therapies.

7. Adrenal disorders:
- Recognize the physiology and pathophysiology of adrenal disorders as well as the hypothalamic pituitary adrenal axis disturbances resulting in the over-activity or the under-activity of the adrenal in Cushing's and Addison's.
- Diagnose and manage Cushing's syndrome and adrenal insufficiency
- Describe how to utilize radiological methods to distinguish and locate the site of the tumor.
- Describe how to recognize and manage Addisonian crisis.
- Describe methods to distinguish between primary and secondary hyperaldosteronism and bilateral adrenal hyperplasia
- Describe the clinical signs and differential diagnosis of pheochromocytoma and the pathogenesis of this tumor in multiple endocrine adenomatosis (MEA).
- Describe the latest advancements in the understanding of the metabolic pathway of adrenomedullary hormones and various metabolites.
- Describe how various medicines may interfere with urinary tests in the work-up of pheochromocytoma and what may be done to avoid these problems.

8. Pituitary disorders:
- Recognize the clinical symptoms and signs of hypopituitarism and hyperpituitarism (acromegaly, Cushing's disease, prolactinoma), and be able to distinguish the etiopathologic pathways for development of each.
• Describe the pathogenic pathways for the development of Cushing’s disease and how to diagnose by use of radiological manipulation.
• Be able to tell the percent surgical success for the major pituitary tumors (acromegaly, Cushing's, and prolactinoma).
• Describe the alternative methods to surgical procedures in the above-mentioned pituitary tumors. Distinguish between a pituitary apoplexy and empty Sella and propose a work-up for each.

9. Gonadal dysfunction:
• Diagnose male hypogonadism and prevalence in the general population versus individuals with type 2 diabetes.
• Diagnose and treat impotency and anorgasmia.
• Diagnose hypogonadism in the female including primary and secondary amenorrhea and how to distinguish, diagnose, and treat such conditions.
• Explain the latest theory regarding the evolution of the polycystic ovary syndrome (PCOS) and the effect of insulin on the evolution of such a syndrome.
• Explain the role of PCOS in the development of metabolic syndrome and the latest theory on managing such patients by medical intervention.

10. Other Aspects of Endocrine and Metabolic Disease Management:
• Recognize the controversy regarding hormone replacement therapy and the data presented to justify or discourage the use of such hormones in different populations.
• Describe the use of appropriate medications in regard to efficacy, cost, and side effects in various endocrine disorders.
REGULATIONS

1. Scheme of the Course

A summary of five years course in MD Endocrinology is presented as under:

<table>
<thead>
<tr>
<th>Course Structure</th>
<th>Components</th>
<th>Examination</th>
</tr>
</thead>
</table>
| **Part I**       | • Basic medical sciences  
Anatomy, Physiology, Biochemistry, Pathology, Pharmacology, Behavioural Sciences and Biostatistics & Research Methodology. | Part-I examination at the end of 1\textsuperscript{st} year of MD Endocrinology programme.  
• Written:  
Paper I: MCQs  
Paper II: SEQs |
| **Part-II**      | • Fundamental Concepts in Internal Medicine:  
Training in clinical techniques of Internal Medicine with compulsory rotations for two years starting from first day of enrollment | Part-II examination at the end of 2\textsuperscript{nd} year of MD Endocrinology programme.  
• Written:  
Papers 1 & 2: Problem-based questions in Internal Medicine  
• Oral & Practical/ Clinical Examination  
  • OSCE  
  • Clinical Examination (Long case, Short cases)  
• Log Book |
| **Part-III**     | **Clinical component of Part III**  
• Professional Education in Endocrinology  
Training in Endocrinology during 3\textsuperscript{rd}, 4\textsuperscript{th} and 5\textsuperscript{th} year of MD program  
Three years of training with compulsory/optional rotations in related fields | Part-III examination in specialized components of Endocrinology at the end of 5\textsuperscript{th} year of MD programme.  
• Written:  
Papers 1 & 2: Problem-based questions in the subject  
• Oral & Practical / Clinical Examination  
  • OSCE  
  • Clinical Examination (Long case, Short cases )  
• Log Book |
|                  | **Research component of Part III**  
• Research and Thesis Writing:  
Research work/Thesis writing project must be completed and thesis be submitted before the end of training. | Part-III examination in Thesis at the end of fifth (5th) year of MD Endocrinology programme. |
2. Examinations

Part-I Examination

1) All candidates admitted in MD Endocrinology course shall appear in Part-I examination at the end of 1\textsuperscript{st} calendar year.

2) The examination shall be held on biannual basis.

3) The candidate who fails to pass the examination in 3 consecutive attempts availed or un-availed, shall be dropped from the course.

4) The examination shall have two components:

- Paper-I MCQs (single best) 100 Marks
- Paper-II SEQs 100 Marks

5) Subjects to be examined shall be Basic Sciences relevant to Endocrinology (Anatomy, Physiology, Biochemistry, Pathology, Pharmacology), Behavioural Sciences and Biostatistics & Research Methodology.

6) To be eligible to appear in Part-I examination the candidate must submit;

   i. duly filled, prescribed Admission Form to the Controller of Examinations duly recommended by the Principal/Head of the Institution in which he/she is enrolled;

   ii. a certificate by the Principal/Head of the Institution, that the candidate has attended at least 75\% of the lectures, seminars, practical/clinical demonstrations;

   iii. Examination fee as prescribed by the University

7) To be declared successful in Part-I examination the candidate must secure 60\% marks in each paper.
Part-II Examination

1. All candidates admitted in MD Endocrinology course shall appear in Part-II examination at the end of 2nd calendar year, and having passed the part I examination.

2. The examination shall be held on biannual basis.

3. The candidate who fails to pass the examination within 3 years of passing the Part-I examination shall be dropped from the course.

4. The examination shall have the following components:
   a. Written 200 Marks
   b. OSCE 50 Marks
   c. Clinical examination 100 Marks
   d. Log Book Evaluation 80 Marks (40 marks per year)

5. There shall be two written papers of 100 marks each:
   - Papers 1 & 2: Principles of Internal Medicine

6. The types of questions shall be of Short/Modified essay type and MCQs (single best).

7. Oral & practical/clinical examination shall be held in clinical techniques in Internal Medicine.

8. To be declared successful in Part-II examination the candidate must secure 60% marks in each component and 50% in each sub-component.

9. Only those candidates, who pass in theory papers, will be eligible to appear in the Oral & Practical/clinical Examination.

10. The candidates, who have passed written examination but failed in oral & practical/clinical examination, will re-appear only in oral & practical/clinical examination.

11. The maximum number of attempts to re-appear in oral & practical/clinical Examination alone shall be three, after which the candidate shall have to appear in both written and oral & practical/clinical examinations as a whole.

12. To be eligible to appear in Part-II examination the candidate must submit:
   i. duly filled, prescribed Admission Form to the Controller of Examinations duly recommended by the Principal/Head of the Institution in which he/she is enrolled;
Curriculum/Statutes & Regulations-MD Endocrinology

ii. a certificate by the Principal/Head of the Institution, that the candidate has attended at least 75% of the lectures, seminars, practical/clinical demonstrations;

iii. a certificate of having passed the Part-I examination;

iv. Examination fee as prescribed by the University.
Part-III Examination

1. All candidates admitted in MD Endocrinology course shall appear in Part-III (clinical) examination at the end of structured training programme (end of 5th calendar year), and having passed the part I & II examinations. However, a candidate holding FCPS / MRCP / Diplomate American Board/equivalent qualification in Internal Medicine shall be exempted from Part-I & Part-II Examinations and shall be directly admitted to Part-III Examinations, subject to fulfillment of requirements for the examination.

2. The examination shall be held on biannual basis.

3. To be eligible to appear in Part-III examination the candidate must submit;
   i. duly filled, prescribed Admission Form to the Controller of Examinations duly recommended by the Principal/Head of the Institution in which he/she is enrolled;
   ii. a certificate by the Principal/Head of the Institution, that the candidate has attended at least 75% of the lectures, seminars, practical/clinical demonstrations;
   iii. Original Log Book complete in all respect and duly signed by the Supervisor (for Oral & practical/clinical Examination);
   iv. certificates of having passed the Part-I & part-II examinations;
   v. Examination fee as prescribed by the University.

4. The Part-III clinical examination shall have the following components:
   - Written 300 marks
   - Oral & practical/clinical examination 300 marks
   - Log Book Evaluation 120 marks (40 marks per year)

5. There shall be two written papers of 150 marks each.

6. Both papers shall have problem-based Short/Modified essay questions and MCQs.

7. Oral & practical/clinical examination shall have 300 marks for:
   i. 1 Long Case 100
   ii. 4 Short Cases 100 (25 marks each)
   iii. OSCE 100
8. To be declared successful in Part-III examination the candidate must secure 60% marks in each component and 50% in each sub-component.

9. Only those candidates, who pass in theory papers, will be eligible to appear in the Oral & Practical/ Clinical Examination.

10. The candidates, who have passed written examination but failed in Oral & Practical/ Clinical Examination, will re-appear only in Oral & Practical/Clinical examination.

11. The maximum number of attempts to re-appear in oral & practical/clinical Examination alone shall be three, after which the candidate shall have to appear in both written and oral & practical/clinical examinations as a whole.

12. The candidate with 80% or above marks shall be deemed to have passed with distinction.

13. Log Book/Assignments: Through out the length of the course, the performance of the candidate shall be recorded on the Log Book.

14. The Supervisor shall certify every year that the Log Book is being maintained and signed regularly.

15. The Log Book will be developed & approved by the Advanced Studies & Research Board.

16. The evaluation will be maintained by the Supervisor (in consultation with the Co- Supervisor, if appointed).

17. The performance of the candidate shall be evaluated on annual basis, e.g., 40 marks for each year in five years MD Endocrinology course. The total marks for Log Book shall be 200. The log book shall reflect the performance of the candidate on following parameters:

   - Year wise record of the competence of skills.
   - Year wise record of the assignments.
   - Year wise record of the evaluation regarding attitude & behaviour
   - Year wise record of journal club / lectures / presentations / clinico-pathologic conferences attended & / or made by the candidate.
3. Submission / Evaluation of Synopsis

1. The candidates shall prepare their synopsis as per guidelines provided by the Advanced Studies & Research Board, available on UHS website.
2. The research topic in clinical subject should have 30% component related to basic sciences and 70% component related to applied clinical sciences. The research topic must consist of a reasonable sample size and sufficient numbers of variables to give training to the candidate to conduct research, to collect & analyze the data.
3. Synopsis of research project shall be submitted by the end of the 3rd year of MD program. The synopsis after review by an Institutional Review Committee shall be submitted to the University for consideration by the Advanced Studies & Research Board, through the Principal / Dean /Head of the institution.

4. Submission of Thesis

1. Thesis shall be submitted by the candidate duly recommended by the Supervisor.
2. The minimum duration between approval of synopsis and submission of thesis shall be one year, but the thesis can not be submitted later than 8 years of enrolment.
3. The research thesis must be compiled and bound in accordance with the Thesis Format Guidelines approved by the University and available on website.
4. The research thesis will be submitted along with the fee prescribed by the University.

5. Thesis Examination

1. All candidates admitted in MD course shall appear in Part-III thesis examination at the end of 5th year of their training course.
2. Only those candidates shall be eligible for thesis evaluation who have passed Part I, II & III (clinical) Examinations.
3. The examination shall include thesis evaluation with defense.
4. The Vice Chancellor shall appoint three external examiners for thesis evaluation, preferably from other universities and from abroad, out of the panel of examiners approved by the Advanced Studies & Research Board. The examiners shall be appointed from respective specialty. Specialists from Internal Medicine and related fields may also be appointed/co-opted, where deemed necessary.

5. The thesis shall be sent to the external examiners for evaluation, well in time before the date of defense examination and should be approved by all the examiners.

6. After the approval of thesis by the evaluators, the thesis defense examination shall be held within the University on such date as may be notified by the Controller of Examinations. The Controller of Examinations shall make appropriate arrangements for the conduct of thesis defense examination in consultation with the supervisor, who will co-ordinate the defense examination.

7. The thesis defense examination shall be conducted by two External Examiners who shall submit a report on the suitability of the candidate for the award of degree. The supervisor shall act as coordinator.

6. **Award of MD Endocrinology Degree**

After successful completion of the structured courses of MD Endocrinology and qualifying Part-I, Part-II and Part-III examinations, the degree with title MD Endocrinology shall be awarded.
CONTENT OUTLINE

Part I MD Endocrinology

1. Anatomy

   I. Hypothalamus and pituitary gland
   II. Pineal gland
   III. Thyroid gland
   IV. Pancreas
   V. Adrenal gland
   VI. Bone
   VII. Reproductive organs
   VIII. Adipose tissue

   • Detailed Anatomy of the listed organ systems, their blood supply, nerve supply, lymphatic drainage and important gross relations to other organs
   • Developmental Anatomy and associated common congenital abnormalities
   • Cell biology, cell cycle, cellular differentiation and proliferation.
   • Tissues of Body: Light and electron microscopic details, structural basis of function, regeneration and degeneration of these organ systems.

2. Physiology

Cellular organization, structure function correlations and physiological alterations in the endocrine organ systems of body

1. Energy balance, metabolism & nutrition
2. Signal transduction pathways and biology of hormone receptors
3. The thyroid gland
4. Endocrine functions of the pancreas & regulation of carbohydrate metabolism
5. The adrenal medulla and adrenal cortex
6. Hormonal control of calcium metabolism & the physiology of bone
7. The pituitary gland
8. The gonads: development & function of the reproductive system
9. Endocrine functions of kidneys, heart & pineal gland

3. Biochemistry

1. Membrane biochemistry and signal transduction
2. Gene expression and the synthesis of proteins
3. Bioenergetics; fuel oxidation and the generation of ATP
4. Carbohydrate metabolism
5. Lipid metabolism
6. Nitrogen metabolism
7. Enzymes and biologic catalysis
8. Tissue metabolism
11. Aquaporins
12. Biotechnology and concepts of molecular biology with special emphasis on use of recombinant DNA techniques in medicine and the molecular biology of cancer
13. General principles of biochemical investigations
14. Basic techniques in molecular biology
15. Cloning and gene analysis
16. Immunochemical techniques
17. Protein chemistry and enzymology
18. Cloning & PCR
19. Protein chemistry and quantification
20. Electrophoretic techniques; PAGE
21. Immunoblotting
22. Raising and purifying antibodies
23. ELISA

4. Pharmacology

1. The Evolution of Medical Drugs
2. British Pharmacopia
3. Pharmacokinetic Processes
4. Pharmacodynamic Process
5. Drug Effect
   a) Beneficial Responses
   b) Harmful Responses
   c) Allergic Responses
6. Drug Dependence, Addiction, Abuse and Tolerance
7. Drug Interactions
8. Drug use in pregnancy and in children

Growth Hormones
1. Growth hormones, antagonists
2. The gonadotropins, follicle stimulating hormone and leutenizing hormone & human chronic gonadotropins.
3. Gonadotropin releasing hormones & its analogs
4. GHRH receptor antagonists
5. Prolactin, dopamine agonists
6. Posterior pituitary hormones
7. Oxytocin & its antagonists
8. Vasopresin & its antagonists

Thyroid
Basic pharmacology of thyroid & anti-thyroid drugs
Adrenal
1. Adreno-corticosteroids & adrenocortical antagonists, cortisol, mineralocorticoids, (Aldosterone, deoxycorticosteroids, fludrocortisones adrenal endogens.
2. Synthesis, inhibitors and gluco-cortical antagonists
3. Mineralocorticoid antagonists

Gonadol Hormones & Inhibitors
1. The ovary (Estrogens, progestins, other ovarian hormones, oral contraceptives, inhibitors and antagonists and ovulation – inducing agents)
2. The testes (Androgens & anabolic steroids, anti-androgens, & male contraception)
3. Pancreatic Hormones & anti-diabetic drugs
4. Insulin, oral anti-diabetic agents
5. Glucagon, islet amyloid polypeptide (IAPP, amylin)

5. Pathology
Pathological alterations at cellular and structural level in the endocrine organ systems of body including non-neoplastic and neoplastic lesions of:

1. Hypothalamus and pituitary gland
2. Pineal gland
3. Thyroid gland
4. Pancreas
5. Adrenal gland
6. Bone
7. Reproductive organs
8. Adipose tissue

6. Biostatistics & Research Methodology
1. Introduction to Bio-Statistics
2. Introduction to Bio- Medical Research
3. Why research is important?
4. What research to do?
   • Selecting a Field for Research
   • Drivers for Health Research
   • Participation in National and International Research
   • Participation in Pharmaceutical Company Research
   • Where do research ideas come from
   • Criteria for a good research topic
5. Ethics in Health Research
6. Writing a Scientific Paper
7. Making a Scientific Presentation
8. Searching the Literature
7. Behavioural Sciences

1. Bio-Psycho-Social (BPS) Model of Health Care
2. Use of Non-medicinal Interventions in Clinical Practice
   • Communication Skills
   • Counseling
   • Informational Skills
3. Crisis Intervention/Disaster Management
4. Conflict Resolution
5. Breaking Bad News
6. Medical Ethics, Professionalism and Doctor-Patient Relationship
   • Hippocratic Oath
   • Four Pillars of Medical Ethics (Autonomy, Beneficence, Non-malificence and Justice)
   • Informed Consent and Confidentiality
   • Ethical Dilemmas in a Doctor’s Life
7. Delivery of Culturally Relevant Care and Cultural Sensitivity
8. Psychological Aspects of Health and Disease
   • Psychological Aspect of Health
   • Psychological Aspect of Disease
   • Stress and its Management
   • Psychological Aspect of Pain
   • Psychological Aspect of Aging
Part II MD Endocrinology

Internal Medicine training for first two years starting from first day of enrollment. Resident should get exposure in the following organ and system competencies (listed below) while considering and practicing each system in terms of:-

- Medical ethics
- Professional values, student teachers relationship
- Orientation of in-patient, out-patients and pulmonary labs
- Approach to the patient
- History taking
- General physical examination
- Systemic examination
- Routine investigations
- Special investigations
- Diagnostic and therapeutic procedures

Course Contents:

1. Cardiovascular Medicine
   Common and / or important Cardiac Problems:
   - Arrhythmias
   - Ischaemic Heart Disease: acute coronary syndromes, stable angina, atherosclerosis
   - Heart Failure
   - Hypertension – including investigation and management of accelerated hypertension
   - Valvular Heart Disease
   - Endocarditis
   - Aortic dissection
   - Syncope
   - Dyslipidaemia
   Clinical Science:
   - Physiological principles of cardiac cycle and cardiac conduction
   - Pharmacology of major drug classes: beta blockers, alpha blockers, ACE inhibitors, Angiotensin receptor blockers (ARBs), anti-platelet agents, thrombolysis, inotropes, calcium channel antagonists, potassium channel activators, diuretics, anti-arrhythmics, anticoagulants, lipid modifying drugs, nitrates, centrally acting anti-hypertensives

2. Dermatology;
   Common and / or Important Problems:
   - Cellulitis
   - Cutaneous drug reactions
   - Psoriasis and eczema
   - Skin failure: e.g. erythryoderma, toxic epidermal necrolysis
   - Urticaria and angio-oedema
   - Cutaneous vasculitis
Herpes zoster and Herpes Simplex infections
Skin tumours
Skin infestations
Dermatomyositis
Scleroderma
Lymphoedema

Clinical Science:
Pharmacology of major drug classes: topical steroids, immunosuppressants

3. Diabetes & Endocrine Medicine

Common and/or Important Diabetes Problems:
- Diabetic ketoacidosis
- Non-acidotic hyperosmolar coma/severe hyperglycaemia
- Hypoglycaemia
- Care of the acutely ill diabetic
- Peri-operative diabetes care

Common or Important Endocrine Problems:
- Hyper/Hypocalcaemia
- Adrenocortical insufficiency
- Hyper/Hyponatraemia
- Thyroid dysfunction
- Dyslipidaemia
- Endocrine emergencies: myxoedemic coma, thyrotoxic crisis, Addisonian crisis, hypopituitary coma, phaeochromocytoma crisis

Clinical Science:
Outline the function, receptors, action, secondary messengers and feedback of hormones
Pharmacology of major drug classes: insulin, oral anti-diabetics, thyroxine, anti-thyroid drugs, corticosteroids, sex hormones, drugs affecting bone metabolism

4. Gastroenterology and Hepatology

Common or Important Problems:
- Peptic Ulceration and Gastritis
- Gastroenteritis
- GI malignancy (oesophagus, gastric, hepatic, pancreatic, colonic)
- Inflammatory bowel disease
- Iron Deficiency anaemia
- Acute GI bleeding
- Acute abdominal pathologies: pancreatitis, cholecystitis, appendicitis, leaking abdominal aortic aneurysm
- Functional disease: irritable bowel syndrome, non-ulcer dyspepsia
- Coeliac disease
- Alcoholic liver disease
- Alcohol withdrawal syndrome
- Acute liver dysfunction: jaundice, ascites, encephalopathy
- Liver cirrhosis
- Gastro-oesophageal reflux disease
Curriculum/Statutes & Regulations-MD Endocrinology

- Nutrition: indications, contraindications and ethical dilemmas of nasogastric feeding and EG tubes, IV nutrition, re-feeding syndrome
- Gall stones
- Viral hepatitis
- Auto-immune liver disease
- Pancreatic cancer

**Clinical Science:**
- Laboratory markers of liver, pancreas and gut dysfunction
- Pharmacology of major drug classes: acid suppressants, anti-spasmodics, laxatives, anti-diarrhoea drugs, aminosalicylates, corticosteroids, immunosuppressants, infliximab, pancreatic enzyme supplements

5. Renal Medicine

**Common and / or Important Problems:**
- Acute renal failure
- Chronic renal failure
- Glomerulonephritis
- Nephrotic syndrome
- Urinary tract infections
- Urinary Calculus
- Renal replacement therapy
- Disturbances of potassium, acid/base, and fluid balance (and appropriate acute interventions)

**Clinical Science:**
- Measurement of renal function
- Metabolic perturbations of acute, chronic, and end-stage renal failure and associated treatments

6. Respiratory Medicine

**Common and / or Important Respiratory Problems:**
- COPD
- Asthma
- Pneumonia
- Pleural disease: Pneumothorax, pleural effusion, mesothelioma
- Lung Cancer
- Respiratory failure and methods of respiratory support
- Pulmonary embolism and DVT
- Tuberculosis
- Interstitial lung disease
- Bronchiectasis
- Respiratory failure and cor-pulmonale
- Pulmonary hypertension

**Clinical Science:**
- Principles of lung function measurement
- Pharmacology of major drug classes: bronchodilators, inhaled corticosteroids, leukotriene receptor antagonists, immunosuppressants

7. Allergy

**Common or Important Allergy Problems**
- Anaphylaxis
Recognition of common allergies; introducing occupation associated allergies
- Food, drug, latex, insect venom allergies
- Urticaria and angioedema

Clinical Science
- Mechanisms of allergic sensitization: primary and secondary prophylaxis
- Natural history of allergic diseases
- Mechanisms of action of anti-allergic drugs and immunotherapy
- Principles and limitations of allergen avoidance

8. Haematology

Common and/or Important Problems:
- Bone marrow failure: causes and complications
- Bleeding disorders: DIC, haemophilia
- Thrombocytopenia
- Anticoagulation treatment: indications, monitoring, management of over-treatment
- Transfusion reactions
- Anaemia: iron deficient, megaloblastic, haemolysis, sickle cell,
- Thrombophilia: classification; indications and implications of screening
- Haemolytic disease
- Myelodysplastic syndromes
- Leukaemia
- Lymphoma
- Myeloma
- Myeloproliferative disease
- Inherited disorders of haemoglobin (sickle cell disease, thalassaemias)
- Amyloid

Clinical Science:
- Structure and function of blood, reticuloendothelial system, erythropoietic tissues

9. Immunology

Common or Important Problems:
- Anaphylaxis (see also ‘Allergy’)

Clinical Science:
- Innate and adaptive immune responses
- Principles of Hypersensitivity and transplantation

10. Infectious Diseases

Common and/or Important Problems:
- Fever of Unknown origin
- Complications of sepsis: shock, DIC, ARDS
- Common community acquired infection: LRTI, UTI, skin and soft tissue infections, viral exanthema, gastroenteritis
- CNS infection: meningitis, encephalitis, brain abscess
- HIV and AIDS including ethical considerations of testing
- Infections in immuno-compromised host
- Tuberculosis
- Anti-microbial drug monitoring
- Endocarditis
- Common genito-urinary conditions: non-gonococcal urethritis, gonorrhoea, syphilis

**Clinical Science:**
- Principles of vaccination
- Pharmacology of major drug classes: penicillins, cephalosporins, tetracyclines, aminoglycosides, macrolides, sulphonamides, quinolones, metronidazole, anti-tuberculous drugs, anti-fungals, anti-malarials, anti-helminthics, anti-virals

**11. Medicine in the Elderly**
*Common or Important Problems:*
- Deterioration in mobility
- Acute confusion
- Stroke and transient ischaemic attack
- Falls
- Age related pharmacology
- Hypothermia
- Continence problems
- Dementia
- Movement disorders including Parkinson’s disease
- Depression in the elderly
- Osteoporosis
- Malnutrition
- Osteoarthritis

**Clinical Science:**
- Effects of ageing on the major organ systems
- Normal laboratory values in older people

**12. Musculoskeletal System**
*Common or Important Problems:*
- Septic arthritis
- Rheumatoid arthritis
- Osteoarthritis
- Seronegative arthritides
- Crystal arthropathy
- Osteoporosis – risk factors, and primary and secondary prevention of complications of osteoporosis
- Polymyalgia and temporal arteritis
- Acute connective tissue disease: systemic lupus erythematosus, scleroderma, poly- and dermatomyositis, Sjogren’s syndrome, vasculitides

**Clinical Science:**
- Pharmacology of major drug classes: NSAIDS, corticosteroids, immunosuppressants, colchicines, allopurinol, bisphosphonates

**13. Neurology**
*Common or Important Problems:*
- Acute new headache
- Stroke and transient ischaemic attack
- Subarachnoid haemorrhage
- Coma
- Central Nervous System infection: encephalitis, meningitis, brain abscess
- Raised intra-cranial pressure
- Sudden loss of consciousness including seizure disorders (see also above syncope etc)
- Acute paralysis: Guillain-Barré, myasthenia gravis, spinal cord lesion
- Multiple sclerosis
- Motor neuron disease

Clinical Science:
- Pathophysiology of pain, speech and language
- Pharmacology of major drug classes: anxiolytics, hypnotics inc. benzodiazepines, antiepileptics, anti-Parkinson’s drugs (anti-muscarinics, dopaminergics)

14. Psychiatry
Common and/or Important Problems:
- Suicide and parasuicide
- Acute psychosis
- Substance dependence
- Depression

Clinical Science:
- Principles of substance addiction, and tolerance
- Pharmacology of major drug classes: anti-psychotics, lithium, tricyclic antidepressants, mono-amine oxidase inhibitors, SSRIs, venlafaxine, donepezil, drugs used in treatment of addiction (bupropion, disulpharam, acamprosate, methadone)

15. Cancer and Palliative Care
Common or Important Oncology Problems:
- Hypercalcaemia
- SVC obstruction
- Spinal cord compression
- Neutropenic sepsis
- Common cancers (presentation, diagnosis, staging, treatment principles): lung, bowel, breast, prostate, stomach, oesophagus, bladder

Common or Important Palliative Care Problems:
- Pain: appropriate use, analgesic ladder, side effects, role of radiotherapy
- Constipation
- Breathlessness
- Nausea and vomiting
- Anxiety and depressed mood

Clinical Science:
- Principles of oncogenesis and metastatic spread
- Apoptosis
- Principles of staging
- Principles of screening
Curriculum/Statutes & Regulations-MD Endocrinology

- Pharmacology of major drug classes in palliative care: anti-emetics, opioids, NSAIDS, agents for neuropathic pain, bisphosphonates, laxatives, anxiolytics

16. Clinical Genetics
Common and / or Important problems:
- Down’s syndrome
- Turner’s syndrome
- Huntington’s disease
- Haemochromatosis
- Marfan’s syndrome
- Klinefelter’s syndrome
- Familial cancer syndromes
- Familial cardiovascular disorders

Clinical Science:
- Structure and function of human cells, chromosomes, DNA, RNA and cellular proteins
- Principles of inheritance: Mendelian, sex-linked, mitochondrial
- Principles of pharmacogenetics
- Principles of mutation, polymorphism, trinucleotide repeat disorders
- Principles of genetic testing including metabolite assays, clinical examination and analysis of nucleic acid (e.g. PCR)

17. Clinical Pharmacology
Common and / or Important problems:
- Corticosteroid treatment: short and long-term complications, bone protection, safe withdrawal of corticosteroids, patient counselling regarding avoid adrenal crises
- Specific treatment of poisoning with:
  - Aspirin,
  - Paracetamol
  - Tricyclic anti-depressants
  - Beta-blockers
  - Carbon monoxide
  - Opiates
    - Digoxin
    - Benzodiazepines

Clinical Science:
- Drug actions at receptor and intracellular level
- Principles of absorption, distribution, metabolism and excretion of drugs
- Effects of genetics on drug metabolism
- Pharmacological principles of drug interaction
- Outline the effects on drug metabolism of: pregnancy, age, renal and liver impairment
Investigation Competencies

Outline the Indications for, and Interpret the Following Investigations:

- Basic blood biochemistry: urea and electrolytes, liver function tests, bone biochemistry, glucose, magnesium
- Cardiac biomarkers and cardiac-specific troponin
- Creatine kinase
- Thyroid function tests
- Inflammatory markers: CRP / ESR
- Arterial Blood Gas analysis
- Cortisol and short Synacthen test
- HbA1C
- Lipid profile
- Amylase
- Drug levels: paracetamol, salicylate, digoxin, antibiotics, anti-convulsants
- Full blood count
- Coagulation screen
- Haemolysis screen
- D-dimer
- Blood film report
- Haematinics
- Blood / Sputum / urine culture
- Fluid analysis: pleural, cerebro-spinal fluid, ascitic
- Urinalysis and urine microscopy
- Auto-antibodies
- H. Pylori testing
- Chest radiograph
- Abdominal radiograph
- Joint radiographs (knee, hip, hands, shoulder, elbow, dorsal spine, ankle)
- ECG
- Peak flow tests
- Full lung function tests

More Advanced Competencies:

- Urine catecholamines
- Sex hormones (FSH, LH, testosterone, oestrogen and progesterone) & Prolactin
- Specialist endocrine suppression or stimulation tests (dexamethasone suppression test; insulin tolerance test; water deprivation test, glucose tolerance test and growth hormone)
- Coeliac serology screening
- Viral hepatitis serology
- Myeloma screen
- Stool testing
- HIV testing
- Ultrasound
- Detailed imaging: Barium studies, CT, CT pulmonary angiography, high resolution CT, MRI
- Imaging in endocrinology (thyroid, pituitary, adrenal)
- Renal imaging: ultrasound, KUB, IVU, CT
- Echocardiogram
- 24 hour ECG monitoring
- Ambulatory blood pressure monitoring
- Exercise tolerance test
- Cardiac perfusion scintigraphy
- Tilt testing
- Neurophysiological studies: EMG, nerve conduction studies, visual and auditory evoked potentials
- Bone scan
- Bone densitometry
- Scintigraphy in endocrinology
- V/Q scanning

**Procedural Competencies**

- The trainee is expected to be competent in performing the following procedures by the end of core training. The trainee must be able to outline the indications for these interventions. For invasive procedures, the trainee must recognize the indications for the procedure, the importance of valid consent, aseptic technique, safe use of local anaesthetics and minimization of patient discomfort.
- Venepuncture
- Cannula insertion, including large bore
- Arterial blood gas sampling
- Lumbar Puncture
- Pleural tap and aspiration
- Intercostal drain insertion: Seldinger technique
- Ascitic tap
- Abdominal paracentesis
- Central venous cannulation
- Initial airway protection: chin lift, Guedel airway, nasal airway, laryngeal mask
- Basic and, subsequently, advanced cardiorespiratory resuscitation
- Bronchoscopy
- Upper and lower GI endoscopy
- ERCP
- Liver biopsy
- Renal biopsy
- Bone marrow and lymph node biopsy
- Cytology: pleural fluid, ascitic fluid, cerebro-spinal fluid, sputum
- DC cardioversion
- Urethral catheterization
- Nasogastric tube placement and checking
- Electrocardiogram
- Knee aspiration
- Temporary cardiac pacing by internal wire or external pacemaker
- Skin Biopsy (this is not mandated for all trainees but opportunities to become competent in this technique should be available especially for trainees who subsequently wish to undertake specialist dermatology training)

Part-III Specialty training in Endocrinology

First year of Part III

SPECIFIC PROGRAM CONTENT

1. Pediatric Endocrinology including Diabetes and Metabolism

Objectives
1. To learn the approach to diagnosis and treatment of disorders affecting children with emphasis on those endocrinologic disorders affecting growth and development, sexual differentiation, and pubertal maturation.
2. To gain experience in dealing with parents of children with diabetes mellitus or endocrine disorders.
3. To gain experience in the evaluation and management of children with diabetes mellitus and in their diabetes education.

Duration
A minimum of two months. Further experience will be arranged depending on the interests and career goals of the resident.

Resources
Pediatric Diabetes and Endocrine Clinic and Inpatient Service

2. Genetics

Objectives
To become familiar with
1. The methods of genetic analysis
2. Genetic counseling of patients and their families
3. Ethical issues associated with genetic analysis and counseling

Duration
A minimum of two weeks. Further experience will be arranged depending on the interests and career goals of the Fellow.

3. Nuclear medicine/Endocrine Imaging

4. Diabetes Mellitus
Type 1 and Type 2 diabetes mellitus, including;
1. Patient monitoring and treatment objectives in adolescents and adults
2. Acute and chronic complications, including
   3. Diabetic ketoacidosis
   4. Hyperosmolar non-ketotic syndromes
   5. Hypoglycemia
   6. Microvascular and macrovascular disease including;
      i) Diabetic retinopathy
ii) Diabetic nephropathy
iii) Diabetic neuropathy
iv) Dermatologic aspects of diabetes
v) Coronary heart disease
vi) Peripheral vascular disease
vii) Cerebral vascular disease

7. Infections in the diabetic patient
8. Gestational diabetes mellitus
9. Diabetes mellitus in the pregnant patient
10. The surgical patient with diabetes mellitus
11. Patient education
12. Psychosocial issues
13. Genetics and genetic counseling as it relates to patients with endocrine and metabolism disorders
14. Dietary principle

**Technical and Other Skills**
1. Management of adolescent and adult patients of all ages with diabetes mellitus, including but not limited to the following aspects of the disease:
2. The utilization and interpretation of autoimmune markers of Type 1 diabetes in patient management and counseling
3. Prescription of exercise programs
4. Rationale for and calculation of diabetic diets
5. Oral antidiabetic therapy
6. The use of intravenous insulin in acute decompensated diabetes mellitus
7. Chronic insulin administration, including the use of all varieties of insulin delivery systems
8. Hyperinsulinemic euglycemic hypoglycemic and hyperglycemic clamps
9. Glucose Tolerance Test
10. Glucose monitoring devices
11. Fundoscopic examination, recognition, and appropriate referral of patients with diabetic retinopathy
12. Foot care
13. Psychosocial effects of diabetes mellitus on patients and their families
14. Patient and community education
Second Year of Part-III

1. **Hypothalamus/ Pituitary**
   a. Hypothalamic insufficiency
   b. Hypothalamic and pituitary tumors, including; pituitary tumors of all types, with particular experience in the diagnosis and management of prolactinoma, acromegaly, Cushing's disease, and clinically non-functioning tumors, craniopharyngioma and other space occupying and infiltrative disorders of the pituitary and hypothalamic region

   **Anterior pituitary disorders:**
   a. Regulation of the pituitary axis
   b. Hypo and Hyperpituitarism
   c. Growth hormone disorders
   d. Prolactin
   e. ACTH axis: Cushing’s disease
   f. Gonadotrophins: Hypogonadotrophic hypogonadism

   **Posterior Pituitary disorders:**
   a. SIADH
   b. Diabetes insipidus (primary and nephrogenic)
   c. Galactorrhea

2. **Technical and Other Skills**
   1. Water deprivation test
   2. Insulin tolerance test
   3. Test for GH deficiency
   4. Dexamethasone suppression test
   5. Glucose tolerance test for acromegaly
   6. Visual field testing
   7. Pituitary imaging

2. **Reproductive Endocrinology**

   **Objectives**
   To gain experience with disorders of reproductive endocrinology and endocrinologic aspects of sexual dysfunction

   **Reproductive Endocrinology of Female:**
   a. Polycystic ovarian syndrome
   b. Hirsutism /virilization
   c. Female infertility
   d. Premature ovarian failure
   e. Menstrual disorders
   f. Dysfunctional uterine bleeding
   g. Menopause
   h. Contraception and hormone replacement therapy
i. Ovarian tumors

**Technical and Other Skills**

1. Screening for ovulation
2. Pelvic and trans-vaginal ultrasound
3. Ovulation induction
4. Laparoscopic
5. Treatment of infertility

**Reproductive Endocrinology of Male:**

a. Testicular physiology
b. Male hypogonadism
c. Male infertility
d. Gynaecomastia
e. Erectile dysfunction
f. Testicular tumors
g. Autoimmune Polyglandular Failure Syndrome
h. Androgen replacement therapy

**Technical and Other Skills**

1. Testicular biopsy
2. Induction of fertility in hypogonadotrophic hypogonadism
3. SMR

**Disorder of sexual differentiation**

a. Hormonal evaluation
b. Androgen insensitivity syndrome
c. True hermaphroditism
d. Gender assignment strategies

**3. Thyroid**

Thyroid disorders, including
a. Hyperthyroidism and hypothyroidism
b. Nodular thyroid diseases
c. Thyroid cancer
d. Goiter
e. Thyroiditis, including chronic, silent, subacute, and autoimmune

**Technical and Other Skills**

1. Performance and cytologic interpretation of fine needle aspiration of the thyroid
2. Thyroid scanning
3. B Scanning for thyroid
4. Assessment of Thyroid Ophthalmopathy
Curriculum/Statutes & Regulations-MD Endocrinology

4. Parathyroid Glands/Calcium/Bone/Magnesium/Phosphorus
   a. Disorders of bone and mineral metabolism, including;
      Hyperparathyroidism and other causes of hypercalcemia
   b. Hypoparathyroidism and other causes of hypocalcemia
   c. Mineral and bone homeostasis
   d. Hormone regulators of mineral homeostasis
   e. Metabolic bone diseases, with particular emphasis on the
diagnosis and management of osteoporosis
   f. Evaluation and prevention of kidney stones
   g. Paget's disease
   h. Osteomalacia, rickets and disorders of vitamin D metabolism
   i. Disorders of magnesium and phosphorus metabolism
   j. Calcitonin and medullary thyroid carcinoma
   k. Bone tumors

Technical and Other Skills
   1. Indication and interpretation of quantitative digital radiography
      and other tests used in the management of osteoporosis and
      other metabolic bone diseases
   2. CT based Calcium scoring
   3. MBI scanning
   4. Dual Energy X-ray Absorbimetry
   5. DEXA scanning

5. Adrenal Gland
   1. Benign and malignant adrenal tumors
   2. Adrenogenital syndromes

Diseases of Adrenal Cortex
   a. Adrenal hyperfunction
   b. Syndrome of glucocorticoid excess
   c. Cushing’s syndrome
   d. Mineralocorticoid excess
   e. Adrenal hypofunction

Diseases of Adrenal Medulla
   a. Catecholamine biosynthesis and metabolism
   b. Phaeochromocytomas
   c. Adrenal "incidentaloma"

Technical and Other Skills
   1. Test of adreno-cortical function
   2. Short and long synacthen test
   3. Post operative management of adrenal tumors
   4. Selective adrenal venous sampling for aldosterone
   5. MIBG scan
   6. Management of suspected phaeochromocytoma
   7. Clonidine suppression test
6. Endocrine Emergencies, including

a. Hypercalcemia and hypocalcemia
b. Severe hypo- and hyperthyroidism
c. Adrenal insufficiency
d. Pituitary apoplexy

Hormone-producing neoplasms, particularly carcinoid syndromes, ectopic hormone production, islet cell tumors and multiple endocrine neoplasia syndromes
Third Year of Part-III

1. Endocrinology of the Gastrointestinal System
   a. Gut hormones and incretins
   b. Carcinoid syndrome
   c. Islet cell tumors

Technical and Other Skills
   1. Localisation of gut tumors
   2. Secretin test

2. Nutrition/ Water, Electrolyte & Acid-Base Disorders
   1. Protein energy malnutrition
   2. The eating disorders
   3. Obesity; pathophysiology, diagnosis and management
   4. Anorexia nervosa and bulimia
   5. Vitamin and mineral deficiency and excess
   6. Micronutrients
   7. Disorders of fluid, electrolyte, and acid-base metabolism, including;
      • Hypernatremia and hyponatremia
      • Hyperkalemia and hypokalemia
      • Metabolic acidosis
      • Metabolic alkalosis
      • Parenteral nutritional support nutritional disorders

Technical and Other Skills
   1. Nutritional assessment
   2. Enteral and parenteral nutrition designing

3. Lipids/ Metabolic Disorders
   a. Hypoglycemic syndromes, including the spectrum of insulinoma and other causes
   b. The diagnosis and management of lipid and lipoprotein disorders
   c. Inborn errors of amino acid metabolism
   d. The diagnosis and management of primary and secondary hypertension
   e. Disorders of porphyrins and metals
   f. Inherited disorders of connective tissue

4. Endocrine aspects of Aging/Psychiatric/Systemic Disorders
   1. Endocrine aspects of psychiatric diseases
2. Endocrine aspects of aging, with particular emphasis on the care of geriatric patients with endocrine disease and diabetes and the endocrine changes associated with aging.

3. Endocrine adaptations and maladaptations to systemic diseases, including effects on the thyroidal, adrenal, and gonadal axes.
4. The effects of a variety of non-endocrine disorders on laboratory and imaging studies and performance and interpretation of stimulation and suppression tests.

**RESEARCH/ THESIS WRITING**

Total of one year will be allocated for work on a research project with thesis writing. Project must be completed and thesis be submitted by the end of training. Research can be done as one block in 5th year of training or it can be stretched over five years of training in the form of regular periodic rotations during the course as long as total research time is equivalent to one calendar year.

**Research**
The active research component program must ensure meaningful, supervised research experience with appropriate protected time for each resident while maintaining the essential clinical experience. Recent productivity by the program faculty and by the residents will be required, including publications in peer-reviewed journals. Residents must learn the design and interpretation of research studies, responsible use of informed consent, and research methodology and interpretation of data. The program must provide instruction in the critical assessment of new therapies and of the medical literature. Residents should be advised and supervised by qualified staff members in the conduct of research.

**Part III Clinical Experience**

1. The training program must provide opportunities for the resident to develop clinical competence in the field of endocrinology, diabetes and metabolism. Clinical experience must include opportunities to diagnose and manage inpatients and outpatients of all ages and both sexes and representing variable acuity who have a wide variety of endocrine and metabolic diseases. The program must also include opportunities to function in the role of an endocrinology consultant for other physicians and services in both inpatient and outpatient settings.

2. The residents must be given opportunities to assume responsibility for and follow patients throughout the training period in both inpatient and outpatient settings in order to observe the evolution
and natural history of these disorders as well as the effectiveness of therapeutic interventions. To accomplish these goals, the educational program must include, on average, a minimum of two half-days each week in ambulatory care. Residents must have experience with patients who have diabetes, as well as thyroid, neuroendocrine, reproductive and metabolic bone diseases and other general endocrine problems.

3. The curriculum must emphasize biochemistry and physiology, including cell and molecular biology, as they relate to endocrinology, diabetes and metabolism. The appropriate utilization and the interpretation of clinical laboratory, radionuclide and radiologic studies for the diagnosis and treatment of endocrine and metabolic diseases must be stressed.

4. Residents must have clinical experience in a multidisciplinary diabetes education and treatment program.

5. Residents must have formal instruction, clinical experience or opportunities to acquire expertise in the evaluation and management of endocrinological disorders.

Part III Research Experience

Clinical Research
Each resident will participate in at least one clinical research study to become familiar with:

1. Research design
2. Research involving human subjects including informed consent and operations of the Institutional Review Board and ethics of human experimentation
3. Data collection and data analysis
4. Research ethics and honesty
5. Peer review process

This usually is done during the consultation and outpatient clinic rotations.

Case Studies or Literature Reviews
Each resident will write, and submit for publication in a peer-reviewed journal, a case study or literature review on a topic of his/her choice.

Laboratory Research

Bench Research

Participation in laboratory research is at the option of the resident and may be arranged through any faculty member of the Division. When appropriate, the research may be done at other institutions.
**Hormone assays**

Each resident will observe and become familiar with current methods of hormone assays including radioimmuno- and immunoradiometric assays.

**Research involving animals**

Each resident participating in research involving animals is required to:
1. Become familiar with the pertinent Rules and Regulations of the University of Health Sciences Lahore i.e. those relating to "Health and Medical Surveillance Program for Laboratory Animal Care Personnel" and "Care and Use of Vertebrate Animals as Subjects in Research and Teaching"
2. Read the "Guide for the Care and Use of Laboratory Animals"
3. View the videotape of the symposium on Humane Animal Care

**Research involving Radioactivity**

Each resident participating in research involving radioactive materials is required to
1. Attend a Radiation Review session
2. Work with an Authorized User and receive appropriate instruction from him/her.
METHODS OF INSTRUCTION/COURSE CONDUCTION

As a policy, active participation of students at all levels will be encouraged.
Following teaching modalities will be employed:

1. Lectures
2. Seminar Presentation and Journal Club Presentations
3. Group Discussions
4. Grand Rounds
5. Clinico-pathological Conferences
6. SEQ as assignments on the content areas
7. Skill teaching in ICU, emergency and ward settings
8. Attend genetic clinics and rounds for at least one month.
9. Attend sessions of genetic counseling
10. Self study, assignments and use of internet
11. Bedside teaching rounds in ward
12. OPD & Follow up clinics
13. Long and short case presentations

In addition to the conventional teaching methodologies interactive strategies like conferences will also be introduced to improve both communication and clinical skills in the upcoming consultants. Conferences must be conducted regularly as scheduled and attended by all available faculty and residents. Residents must actively request autopsies and participate in formal review of gross and microscopic pathological material from patients who have been under their care. It is essential that residents participate in planning and in conducting conferences.

1. Clinical Case Conference
Each resident will be responsible for at least one clinical case conference each month. The cases discussed may be those seen on either the consultation or clinic service or during rotations in specialty areas. The resident, with the advice of the Attending Physician on the Consultation Service, will prepare and present the case(s) and review the relevant literature.

2. Monthly Student Meetings
Each affiliated medical college approved to conduct training for MD Endocrinology will provide a room for student meetings/discussions such as:

a. Journal Club Meeting
b. Core Curriculum Meetings
c. Skill Development
a. Journal Club Meeting

A resident will be assigned to present, in depth, a research article or topic of his/her choice of actual or potential broad interest and/or application. Two hours per month should be allocated to discussion of any current articles or topics introduced by any participant. Faculty or outside researchers will be invited to present outlines or results of current research activities. The article should be critically evaluated and its applicable results should be highlighted, which can be incorporated in clinical practice. Record of all such articles should be maintained in the relevant department.

b. Core Curriculum Meetings

All the core topics of Endocrinology should be thoroughly discussed during these sessions. The duration of each session should be at least two hours once a month. It should be chaired by the chief resident (elected by the residents of the relevant discipline). Each resident should be given an opportunity to brainstorm all topics included in the course and to generate new ideas regarding the improvement of the course structure.

c. Skill Development

Two hours twice a month should be assigned for learning and practicing clinical skills.

List of skills to be learnt during these sessions is as follows:

1. Residents must develop a comprehensive understanding of the indications, contraindications, limitations, complications, techniques, and interpretation of results of those technical procedures integral to the discipline (mentioned in the Log Book).
2. Residents must acquire knowledge of and skill in educating patients about the technique, rationale and ramifications of procedures and in obtaining procedure-specific informed consent. Faculty supervision of residents in their performance is required, and each resident's experience in such procedures must be documented by the program director.
3. Residents must have instruction in the evaluation of medical literature, clinical epidemiology, clinical study design, relative and absolute risks of disease, medical statistics and medical decision-making.
4. Training must include cultural, social, family, behavioral and economic issues, such as confidentiality of information, indications for life support systems, and allocation of limited resources.
5. Residents must be taught the social and economic impact of their decisions on patients, the primary care physician and society. This can be achieved by attending the bioethics lectures and becoming familiar with Project Professionalism Manual such as that of the American Board of Internal Medicine.
6. Residents should have instruction and experience with patient counseling skills and community education.
7. This training should emphasize effective communication techniques for diverse populations, as well as organizational resources useful for patient and community education.
8. Each resident should attend at least one series of classes given to patients with diabetes mellitus and at least two counseling sessions in the Nutrition Clinic for patients with diabetes mellitus, obesity or lipid disorders.
9. Residents may attend the series of lectures on Nuclear Medicine procedures (radionuclide scanning and localization tests and therapy) presented to the Radiology residents.
10. Each resident will observe and participate in each of the following procedures, preferably done on patients under his/her care including thyroid uptake and scanning; total body scan for thyroid cancer; ultrasound of the thyroid, DEXA scans, central and peripheral and other imaging procedures for endocrine problems.
11. Residents should have experience in the performance of endocrine clinical laboratory and radionuclide studies and basic laboratory techniques, including quality control, quality assurance and proficiency standards.

3. Annual Grand Meeting

Once a year all residents enrolled for MD Endocrinology should be invited to the annual meeting at UHS Lahore. One full day will be allocated to this event. All the chief residents from affiliated institutes will present their annual reports. Issues and concerns related to their relevant courses will be discussed. Feedback should be collected and suggestions should be sought in order to involve residents in decision making. The research work done by residents and their literary work may be displayed. In the evening an informal gathering and dinner can be arranged. This will help in creating a sense of belonging and ownership among students and the faculty.
LOG BOOK

The residents must maintain a log book and get it signed regularly by the supervisor. A complete and duly certified log book should be part of the requirement to sit for MD examination. Log book should include adequate number of diagnostic and therapeutic procedures observed and performed, the indications for the procedure, any complications and the interpretation of the results, routine and emergency management of patients, case presentations in CPCs, journal club meetings and literature review.

Proposed Format of Log Book is as follows:

Candidate’s Name: ---------------------------------------------
Supervisor ------------------------------------------------------
Roll No. ----------------------------------------------------------

The procedures shall be entered in the log book as per format

Residents should become proficient in performing the related procedures. After observing the technique, they will be observed while performing the procedure and, when deemed competent by the supervising physician, will perform it independently. They will be responsible for obtaining informed consent, performing the procedure, reviewing the results with the pathologist and the attending physician and informing the patient and, where appropriate, the referring physician of the results.

Evaluation Record

(Excellent, Good, Adequate, Inadequate, Poor)

At the end of the rotation, each faculty member will provide an evaluation of the clinical performance of the fellow.

### EVALUATION & ASSESSMENT STRATEGIES

#### Assessment

It will consist of action and professional growth oriented student-centered integrated assessment with an additional component of informal internal assessment, formative assessment and measurement-based summative assessment.

#### Student-Centered Integrated Assessment

It views students as decision-makers in need of information about their own performance. Integrated Assessment is meant to give students responsibility for deciding what to evaluate, as well as how to evaluate it, encourages students to ‘own’ the evaluation and to use it as a basis for self-improvement. Therefore, it tends to be growth-oriented, student-controlled, collaborative, dynamic, contextualized, informal, flexible and action-oriented.

In the proposed curriculum, it will be based on:

- Self Assessment by the student
- Peer Assessment
- Informal Internal Assessment by the Faculty

#### Self Assessment by the Student

Each student will be provided with a pre-designed self-assessment form to evaluate his/her level of comfort and competency in dealing with different relevant clinical situations. It will be the responsibility of the student to correctly identify his/her areas of weakness and to take appropriate measures to address those weaknesses.

#### Peer Assessment

The students will also be expected to evaluate their peers after the monthly small group meeting. These should be followed by a constructive feedback according to the prescribed guidelines and should be non-judgmental in nature. This will enable students to become good mentors in future.

#### Informal Internal Assessment by the Faculty

There will be no formal allocation of marks for the component of Internal Assessment so that students are willing to confront their weaknesses rather than hiding them from their instructors.
It will include:

a. Punctuality  
b. Ward work  
c. Monthly assessment (written tests to indicate particular areas of weaknesses)  
d. Participation in interactive sessions

**Formative Assessment**

Will help to improve the existing instructional methods and the curriculum in use

*Feedback to the faculty by the students:*

After every three months students will be providing a written feedback regarding their course components and teaching methods. This will help to identify strengths and weaknesses of the relevant course, faculty members and to ascertain areas for further improvement.

**Summative Assessment**

It will be carried out at the end of the programme to empirically evaluate cognitive, psychomotor and affective domains in order to award degrees for successful completion of courses.
MD ENDOCRINOLOGY EXAMINATIONS

Part I MD Endocrinology
Total Marks: 200

All candidates admitted in MD Endocrinology course shall appear in Part I examination at the end of first calendar year.

Components of Part-I Examination:
Paper-I, 100 MCQs (single best, having one mark each) 100 Marks
Paper-II, 10 SEQS (having 10 marks each) 100 Marks

Topics included in paper:
1. Anatomy (20 MCQs) (2 SEQS)
2. Physiology (20 MCQs) (2 SEQS)
3. Pathology (20 MCQs) (2 SEQS)
4. Biochemistry (15 MCQs) (1 SEQ)
5. Pharmacology (10 MCQs) (1 SEQ)
6. Behavioural Sciences (10 MCQs) (1 SEQ)
7. Biostatistics & Research Methodology (05 MCQs) (1 SEQ)

Part II MD Endocrinology
Total Marks: 430

All candidates admitted in MD Endocrinology course shall appear in Part II examination at the end of 2nd calendar year.

There shall be two written papers of 100 marks each, Oral & practical/clinical examination of 150 marks and log book assessment of 80 marks.

Topics included in paper 1

Principles of internal medicine including;
1. Pulmonary Medicine (10 MCQs)
2. Cardiovascular Illness (10 MCQs)
3. Endocrinology and Metabolism (10 MCQs)
4. Allergy and Immunology (05 MCQs)
5. Infectious Disease (05 MCQs)
6. Clinical Genetics (05 MCQs)
7. Clinical pharmacology (05 MCQs)
**Topics included in paper 2**

Principles of internal medicine including;
1. Nephrology (10 MCQs)
2. Neurology (10 MCQs)
3. Gastroenterology & Hepatology (10 MCQs)
4. Hematology & Oncology (10 MCQs)
5. Dermatology (05 MCQs)
6. Rheumatology (05 MCQs)

**Components of Part II Examination**

**Theory:**

**Paper 1:**
- 10 SEQs (No Choice; 05 marks each) 50 Marks
- 50 MCQs 50 Marks

**Paper 2:**
- 10 SEQs (No Choice; 05 marks each) 50 Marks
- 50 MCQs 50 Marks

Only those candidates, who pass in theory papers, will be eligible to appear in the Oral & Practical/Clinical Examination.

Oral & Practical/ Clinical Examination shall be held in clinical techniques relevant to internal medicine.

**OSCE** 50 Marks

10 stations each carrying 05 marks of 10 minutes duration; each evaluating performance based assessment with five of them interactive.

**Clinical** 100 Marks

- Four short cases (15 marks each) 60 Marks
- One long case: 40 Marks

**Log Book** 80 Marks
Part III MD Endocrinology
Total Marks: 920

All candidates admitted in MD course shall appear in Part-III examination at the end of structured training programme (end of 5th calendar year and after clearing Part I & II examinations).

There shall be two written papers of 150 marks each, Oral & Practical/ Clinical examination of 300 marks, log book assessment of 120 marks and thesis examination of 200 marks.

Topics included in paper 1

1. Pediatric Endocrinology (25 MCQs)
2. Diabetes Mellitus (15 MCQs)
3. Hypothalamus/ Pituitary (15 MCQs)
4. Genetics of endocrinology (10 MCQs)
5. Nuclear medicine/endocrine imaging (05 MCQs)
6. Endocrine aspects of Aging/Psychiatric/ Systemic disorders (05 MCQs)

Topics included in paper 2

1. Reproductive Endocrinology (20 MCQs)
2. Thyroid (15 MCQs)
3. Adrenal (10 MCQs)
4. Calcium/Bone/Magnesium/Phosphorus (10 MCQs)
5. Lipids/ Metabolic Disorders (10 MCQs)
6. GI Endocrinology (04 MCQs)
7. Nutrition clinic (04 MCQs)
8. Wound care clinic (02 MCQs)

Components of Part III Examination

Theory

**Paper I**
15 SEQs (No Choice) 75 Marks
75 MCQs 75 Marks

**Paper II**
15 SEQs (No Choice) 75 Marks
75 MCQs 75 Marks
Only those candidates, who pass in theory papers, will be eligible to appear in the Oral & Practical/ Clinical Examination.
